About the Institute

The Institute of Public Utilities (IPU) was established in 1965 and at Michigan State University, the nation's pioneer land-grant institution, and is located on MSU's beautiful East Lansing campus. IPU operates as a self-sustaining unit within the College of Social Science and collaborates with faculty and researchers from various academic colleges, departments, and centers.

IPU specializes in building capacity for meeting the challenges of utility, network, and market governance, including modernization and transformation. IPU's neutral analytical and instructional practice is informed by a broad array of traditional and applied disciplines, including economics, political science, law, accounting, finance, and engineering. IPU's diverse program faculty includes nationally recognized university educators and expert practitioners known for their insight, experience, and teaching ability.

IPU forums provide exceptional development and networking opportunities for everyone in the utility policy community, whether from the public, not-for-profit, or private sectors, including but not limited to: regulatory commissioners, board members, and other officials; staff members of commissions and other agencies; consumer and environmental advocates; attorneys, accountants, engineers, consultants, and other professionals; and public utility personnel.

IPU programs are designed to be eligible for continuing education credits as well as IPU's Certificate of Continuing Regulatory Education (www.ipu.msu.edu/ccre).

IPU's Mission

The Institute of Public Utilities (IPU) supports informed, effective, and efficient regulation of the providers of essential utility infrastructure and services – electricity, natural gas, water, and broadband. We fulfill our mission by delivering to the

utility policy community independent, integrative, and interdisciplinary educational curricula and applied research on the institutions, theory, and practice of economic regulation and ratemaking.

IPU is devoted to the ideals of regulation in the public interest. Public utility services are fundamental to the human condition in terms of health, welfare, and development. Economic regulation is essential in the context of persistent market constraints and evolving social objectives. IPU is uncompromising with respect to the obligations of diligence and integrity in regulatory governance.

IPU takes a principled approach to regulation, an empirical approach to regulatory research, and a reasoned approach to structural and regulatory change. IPU's guiding philosophy is that utility policy and regulation are well served by university-based research and education.

The IPU Advantage is:

- University-sponsored and credit-eligible continuing education.
- Institutional expertise to translate principles into practice.
- Highly qualified, experienced, and objective program instructors.
- Professionally designed and delivered curriculum and materials.
- Personal attention and valuable networking experiences.
- Superior program value at a lower cost of participation.
- Flexible options, special discounts, and no cancellation fees.

Dr. Janice Beecher (beecher@msu.edu) has served as IPU's Director since 2002.
